Software Engineering graduate and Enterprise Technology Architect at Accenture with a background spanning AI/NLP research, cloud infrastructure, and AI platform development.

Education

Universidad Nacional del Mar del Plata

Software Engineering

Recognised for academic excellence with a "Distinguished Graduate" honour.

Mar del Plata, BA

2024

Experience

ACCENTURE

Mar del Plata, BA

Enterprise Technology Architect - Cloud and AI

May 2026 – Present

- Built a multi-flavour MCP Server framework in TypeScript, implementing multiple server patterns and deployment configurations; adopted by 20+ developers across Accenture as the base template for AI platform integrations.
- Implemented an authentication module integrating MCP Servers with Microsoft EntraID, providing enterprise-grade identity and access management now used by every service built on the reference architecture.

Technology Architect – Cloud and Infrastructure

November 2024 – May 2026

- Automated payroll processing workflows for a large-scale system, ensuring accurate, reliable processing for thousands of users.
- Led infrastructure optimization for 50+ servers, achieving up to 30% cost savings.
- Managed cloud infrastructure (AWS, Azure) with deployments, server maintenance, building and maintaining CI/CD pipelines, security monitoring, and environment provisioning.
- Prioritized work queues and acted as cross-team point of contact, improving operational efficiency.
- Conducted an architecture assessment for a banking client, evaluating API management strategies and vendors, delivering recommendations based on security, scalability, governance, and cost.

ServiceNow Application Developer

December 2023 – November 2024

- Delivered ServiceNow solutions (workflows, automation, SQL, access control), improving operational efficiency and compliance.
- Ensured high system reliability by monitoring performance and resolving incidents.
- Contributed to cloud migration of on-premises infrastructure.

Info-Lab

Mar del Plata, BA

Software Engineer Researcher

April 2021 – December 2023

- Led the design and development of the OlympIA web system for textual evidence analysis: built datasets, trained multiple models, and created a web interface that processes evidence and presents a summarized graphical report of the results. Reducing evidence processing time from 7 days to just 15 minutes, a 200x efficiency improvement. (Python, Spacy, Altair, Pandas, Celery, Redis etc.)
- Worked on training, testing, and applying AI and NLP models to the analysis and processing of digital evidence. Co-authored papers on applied artificial intelligence, NLP and Biometric data, presented at CIIDDI and InfoConf.
- Designed and developed SUR-GEN, a two-role web platform for unified gender violence case management, built for judicial operators and victims. Features include case lifecycle management, document handling, role-based access control, a full audit trail, and a data visualization module. (Django · PostgreSQL · Pandas · Matplotlib · Folium)

Software Engineer Intern

January 2021 – April 2021

- Applied NLP techniques for violence detection in text as part of the TRIAGE-ED Project, assisting in the cleaning, processing and analysing of a dataset containing over 2000 judicial cases.

Universidad Nacional del Mar del Plata

Mar del Plata, BA

Operating Systems Teaching Assistant

January 2021 –

Present

- Gave practical lectures in operating systems and operating system design courses.

Certifications

Oracle Cloud Infrastructure 2025 AI Foundations Associate.

Microsoft Certified: Azure Fundamentals 2025, Azure AI Fundamentals 2026.

Scrum Foundation Professional Certification - SFPC™. (2024)

Skills

- **Programming Languages:** Python, Javascript, Typescript, Java.
- **AI & Machine Learning:** MCP, Agents, TensorFlow, Classification, Regression, Clustering, Model evaluation, Natural Language Processing, Prompt Engineering, scikit-learn, SpaCy, Whisper.
- **Data Science, Analytics & Visualization:** Numpy, Pandas, Jupyter Notebooks, Data Cleaning, Data Analysis, ETL, Altair, Seaborn, Matplotlib, Folium.
- **Web Development:** Django, FastAPI, React, HTML, CSS, Bootstrap.
- **Databases:** SQL, PostgreSQL, SQLite, Database Design, ER Modeling.
- **Cloud Infrastructure:** Microsoft Azure, AWS, Oracle Cloud, Server Management.
- **DevOps & Workflow Tools:** Azure DevOps, CI/CD pipelines, ServiceNow, Git.
- **Distributed Systems & Messaging:** Celery, Redis.
- **Agile Methodologies & Requirements Analysis.**
